comp1511 week 2

starting 9:10am

Ada Luong

important things to note

- log into **ed** (the course forum)
- set up **home computing** (vlab or otherwise) so you can access cse machines outside of lab time
- **tutorial code and feedback form** can be found at https://github.com/adaluong/cs1511_22t1/
- **email**: ada.luong@unsw.edu.au
  - if you have a programming question -> search & post on the forum

what's happening today?

- **code demo**: variables/constants, scanf, if statements
- Kahoot! ft. some detours
  - Variables
  - If statements
  - Program Flow
  - C Operators
  - C Quirks

questions?

making decisions with computers :0

NOT

program flow: leap year

https://en.wikipedia.org/wiki/Leap_year#Algorithm

C Quirks

- modulo (see modulo_calculator.c)
- integer division (see integer_division.c)
- floating point errors (see floating_point_error.c)

modulo (%)
gives the remainder
Modulo Calculator by Peter Kerr (Tutor)
https://repl.it/@Divinitus/Modulo-Calculator
(will push a copy onto github)

- 5 % 3
- 1%2
- -1 %2

$$11 \bmod 4 = 3$$

C arithmetic examples

$$1 / 2 * 500 =$$

C arithmetic examples

1 / 2 * 500 = 0

C arithmetic examples

1 / 2 * 500 = 0

1 / 2.0 * 500 =

C arithmetic examples

1 / 2 * 500 = 0

1 / 2.0 * 500 = 250.0

C arithmetic examples

$$1 / 2 * 500 = 0$$

$$1 / 2.0 * 500 = 250.0$$

$$(17 / 5) * 5 + (17 \% 5) =$$

C arithmetic examples

1 / 2 * 500 = 0

1 / 2.0 * 500 = 250.0

(17 / 5) * 5 + (17 % 5) = 17

C arithmetic examples

$$1 / 2 * 500 = 0$$

$$1 / 2.0 * 500 = 250.0$$

$$(17 / 5) * 5 + (17 \% 5) = 17$$

$$(12 - 17) \% 6 - 4 =$$

C arithmetic examples

$$1 / 2 * 500 = 0$$

$$1 / 2.0 * 500 = 250.0$$

$$(17 / 5) * 5 + (17 \% 5) = 17$$

$$(12 - 17) \% 6 - 4 = -9$$
